The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

09/702,094

Applicant(s)

FRIEDMAN ET AL.

Examiner

AVI GOLD

Art Unit

2457

Period for Reply

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 06 August 2008.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 57-88 is/are pending in the application.
- 4a) Of the above claim(s) 68-88 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 57-67 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Final Drawing Review (PTO-64C)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
- 4) ☐ Interview Summary (PTO-413)
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____
- Paper No(s)/Mail Date 7/24/08, 10/7/08

DETAILED ACTION

All claims were canceled and claims 57-88 were added in the response prior to the restriction. This action is responsive to the election filed on August 8, 2008. Claims 57-67 were elected. Claims 68-88 were withdrawn. Claims 57-67 are pending.

Response to Amendment

Election/Restrictions

1. Applicant's election with traverse of analyzing interconnections between routing devices by approximating the behavior at said devices in the reply filed on August 6, 2008 is acknowledged. The traversal is on the ground(s) that the Applicant believes the Examiner would not be subject to a serious burden when examining all claims. This is not found persuasive because the three claim groups involve different methods of routing network traffic which would require multiple searches, thus creating a serious burden.

The requirement is still deemed proper and is therefore made FINAL.

2. This application contains claims 68-88 drawn to an invention nonelected with traverse in the reply filed on August 6, 2008. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 57-60, 62, 63, and 66 are rejected under 35 U.S.C. 102(e) as being anticipated by Leinwand et al., U.S. Patent No. 6,130,890.

Leinwand teaches the invention as claimed including a method and system for improving routing decisions, particularly for Internet data packets traveling to a destination associated with another country (see abstract).

Regarding claim 57, Leinwand teaches a method for routing network traffic, comprising:

a. receiving the network traffic at a router (col. 3, lines 9-11, Leinwand discloses a packet traveling over a system from source to destination);

b. determining a geographic location of the router using an IP address of the router (col. 2, lines 14-19, Leinwand discloses autonomous systems acting as intermediate nodes to route a packet to its destination; col. 3, lines 20-44, Leinwand discloses autonomous systems having a geographic locations and IP addresses assigned to a system based on its geographic area);

c. determining a destination for the network traffic received at the router (col. 3, lines 11-13, Leinwand discloses a destination in a geographic area);

d. determining a geographic location of the destination using an IP address of the destination (col. 3, lines 11-13, lines 20-44);

e. determining a first route to the destination, the first route comprising at least a first intermediate routing device (col. 3, lines 9-11);

f. deriving a geographic location of the first intermediate routing device using an IP address of the first intermediate routing device (col. 3, lines 9-44, col. 7, lines 5-25, Leinwand discloses routers making a decision as to which of the autonomous systems the data packet is going to next);

g. analyzing a first interconnection between one or more routing devices in the first route by approximating the behavior at the one or more routing devices in the first route (col. 3, lines 9-44, col. 7, lines 5-25, col. 10, line 57 – col. 11, line 24, Leinwand discloses avoiding overloading by analyzing links and approximating behavior);

h. determining a second route to the destination, the second route comprising at least a second intermediate routing device;

i. deriving a geographic location of the second intermediate routing device using an IP address of the second intermediate routing device (col. 3, lines 9-44);

j. analyzing a second interconnection between one or more routing devices in the second route by approximating the behavior at the one or more routing devices in the second route (col. 3, lines 9-44, col. 7, lines 5-25, col. 10, line 57 – col. 11, line 24);

k. selecting a route from one of the first route or the second route using the geographic location of the destination, the geographic location of the router, the geographic location of the first intermediate routing device, the geographic location of the second intermediate routing device, the approximated behavior at the one or more routing devices in the first route, and the approximated behavior at the one or more routing devices in the second route (col. 2, lines 14-19, col. 3, lines 9-44, col. 7, lines 5-25, col. 10, line 57 – col. 11, line 24); and

l. directing the network traffic along the selected route to the destination (col. 3, lines 9-34, Leinwand discloses a packet being routed to its destination based on its source or destination location).

Regarding claim 58, Leinwand teaches the method of claim 57, wherein the network traffic comprises a request and the destination comprises a server (col. 2, lines 14-20, Leinwand discloses autonomous systems requesting traffic).

Regarding claim 59, Leinwand teaches the method of claim 57, wherein the selecting step further comprises selecting a route with a shortest distance to the destination (col. 2, lines 14-20, Leinwand discloses autonomous systems requesting traffic).

Regarding claim 60, Leinwand teaches the method of claim 57, wherein the selecting step further comprises selecting a route having the shortest latency time (col. 9, lines 22-39, Leinwand discloses choosing a route to avoid delays in transmission).

Regarding claim 62, Leinwand teaches the method of claim 57, wherein determining a destination comprises selecting a destination based on its load (col. 11, lines 5-24, Leinwand discloses choosing a route to avoid congestion).

Regarding claim 63, Leinwand teaches method of claim 57, wherein determining a destination comprises selecting a destination based on a connection speed associated with a source of the network traffic (col. 11, lines 5-24, Leinwand discloses choosing a route having the fastest speed for the data packet).

Regarding claim 66, Leinwand teaches the method of claim 57, wherein the network comprises the Internet and the network traffic comprises packets (col. 4, lines 36-38, Leinwand discloses network traffic comprised of packets routed over the Internet).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 61, 64, and 65 are rejected under 35 U.S.C. 103(a) as being unpatentable over Leinwand further in view of Rochberger et al., U.S. Patent No. 6,577,653.

Leinwand teaches the invention substantially as claimed including a method and system for improving routing decisions, particularly for Internet data packets traveling to a destination associated with another country (see abstract).

As to claims 61, 64, and 65, Leinwand teaches the method of claim 57.

Leinwand fails to teach the limitation further including the selection of a route based on bandwidth.

However, Rochberger teaches establishing a route in an Asynchronous Transfer Mode (ATM) network utilizing one or more parallel route segments (see abstract). Rochberger teaches the use of selecting a route based on having the most available bandwidth and selecting the amount of bandwidth available at the destination (col. 9, lines 28-62).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Leinwand in view of Rochberger to select a route of traffic based on bandwidth. One would be motivated to do so because decisions based on bandwidth help avoid congestion in data traffic.

7. Claim 67 is rejected under 35 U.S.C. 103(a) as being unpatentable over Leinwand further in view of Ansell et al., U.S. Patent No. 6,151,631.

Leinwand teaches the invention substantially as claimed including a method and system for improving routing decisions, particularly for Internet data packets traveling to a destination associated with another country (see abstract).

As to claim 67, Leinwand teaches the method of claim 57.

Leinwand fails to teach the limitation further including the assignment of a confidence level.

However, Ansell teaches an efficient mechanism for determining a geopolitical territory in which a computer of a wide area computer network is located (see abstract). Ansell teaches the use of a level of confidence (col. 8-9).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Leinwand in view of Ansell to assign a level of confidence. One would be motivated to do so because it determines if a specification is met with satisfaction.

Response to Arguments

8. Applicant's arguments with respect to claims 57-67 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

9. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Pat. No. 6,272,150 to Hrastar et al.

U.S. Pat. No. 6,266,607 to Meis et al.

U.S. Pat. No. 6,151,631 to Ansell et al.

U.S. Pat. No. 6,285,748 to Lewis.

U.S. Pat. No. 6,347,078 to Narvaez-Guarnieri et al.

U.S. Pat. No. 5,774,668 to Choquier et al.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to AVI GOLD whose telephone number is (571)272-4002. The examiner can normally be reached on M-F 8:00-5:30 (1st Friday Off).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ario Etienne can be reached on 571-272-4001. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
